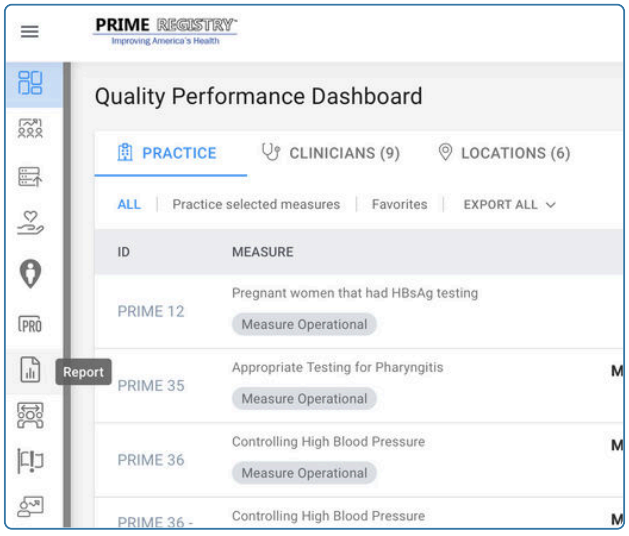
May Report of the Month:

Measure Performance-Provider Level Report

Learn how Dr. Clarke uses this report to review each clinician's performance, identify room for improvement, measure improvement over time, and celebrate high quality clinical work.

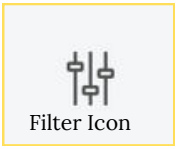
Business owner and physician Dr. Kennedy Clarke of Clarke Primary Care prides herself on maintaining a staff of talented clinicians. The success of her primary care practice largely depends on the performance of the providers that she employs. With such a busy schedule, Dr. Clarke lacks the time needed to spend on quality improvement and reporting. She is looking for an easy way to generate a report that provides performance details for specific quality measures at the provider level. As a member of PRIME, she is in luck! The Measure Performance – Provider Level report provides exactly what she needs in just a few clicks.

Here's how it works:
From the main Quality Dashboard page, navigate to the **report module** by selecting the Report **icon** on the left hand navigation pane.

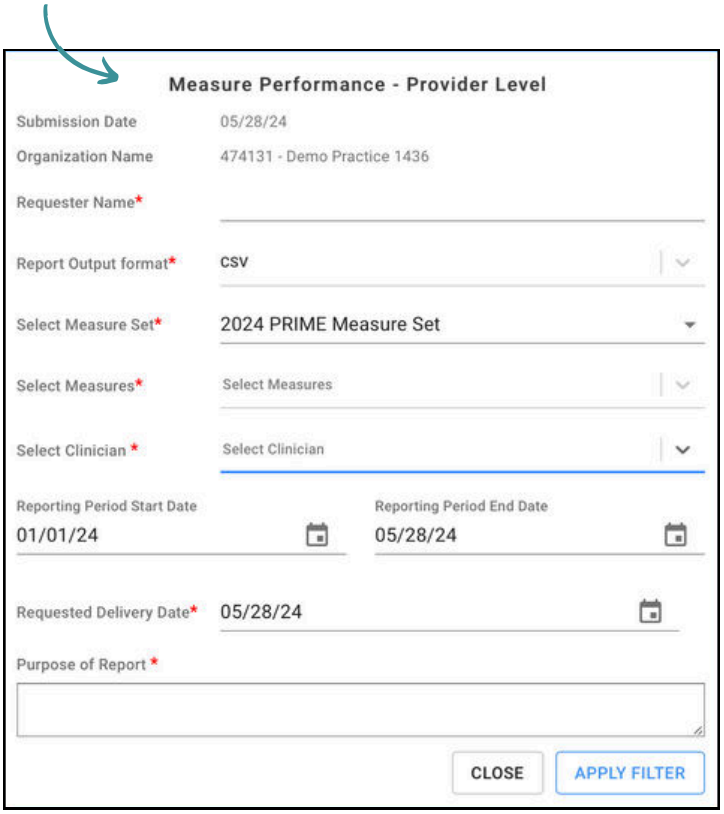


Then select the **Measure Performance-Provider Level Report**

Next, select the **filter icon**, in the bar to the right of the report title.



A window will pop up, where it's easy to customize the report to your unique specifications:



Type in 'requester name', and select the report output format (csv, xls or PDF).
Then select the clinicians and measures on which you would like to see data.
You can also select the exact start and end dates for the desired reporting period, then set the requested delivery date. <u>This date can be set in the future!</u> This feature allows Dr. Clarke to create monthly or quarterly reports that will *generate automatically* on the date she needs them, saving time and effort, freeing her up for other important work.
This feature can work for you, too!
After selecting "APPLY FILTER" the report will automatically generate and appear as a downloadable .xlsx, .csv, or PDF file in the report history--just click the eye icon to view.
