PRIME REGISTRY™

Improving America's Health

Report of the Month:

Promoting Interoperability - Group

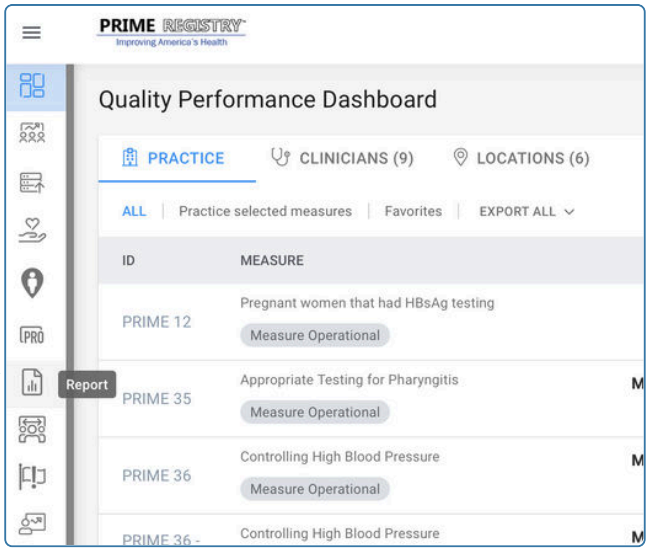
Learn how the PRIME Registry Promoting Interoperability – Individual report can help you prepare for submitting QPP/MIPS measures.

Joe Schmidt, RN, BSN is the practice administrator for a Federally Qualified Community Health Center (FQHC) in his city. The FQHC leverages health information technology to make it easier for patients to access their health information, and especially for information to be exchanged between healthcare providers. His practice is an FQHC that does participate in MIPS, so submitting data on the FQHC's Promoting Interoperability (PI) performance category is a win-win, helping the FQHC receive a positive payment adjustment, and enabling them to keep providing quality care to the patients in the community.

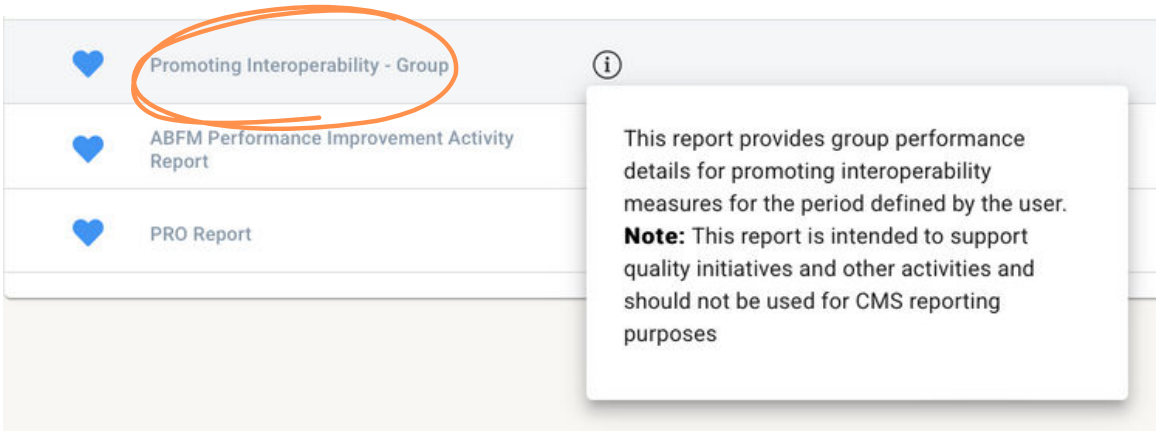
As a proactive practice administrator, Joe reviews the PI measure scores on a monthly basis, to make sure the practice is ready for MIPS submission in the spring. To do this, Joe uses the **Promoting Interoperability – Group report** in the PRIME Registry reports tool to make sure the measures are accurately capturing the FQHC's use of interoperability tools. Then Joe will submit the PI measures data to CMS through the PRIME Registry's MIPS dashboard

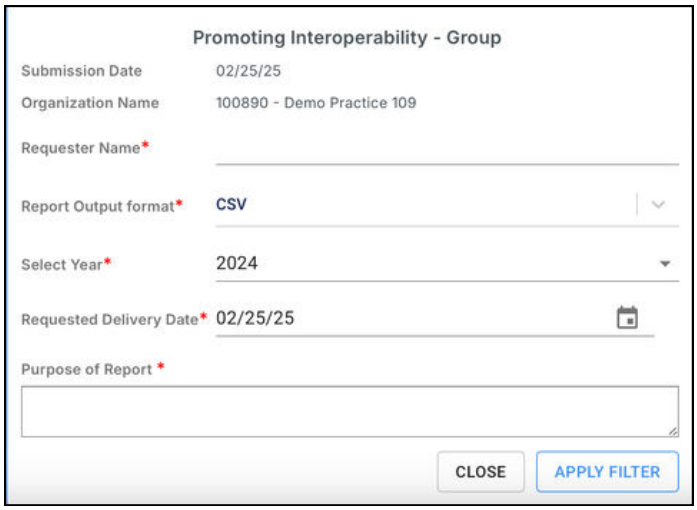
To access the report, Joe logs in to the PRIME quality dashboard, and navigates to the report module by selecting the Report icon in the left hand navigation pane. (See screen shot, next page.)

The Report icon is in the left hand navigation pane.



He locates the Promoting Interoperability - Group report in the list view.



Next, he selects the **filter icon**, in the bar to the far right of the report title.


A window pops up, where it's easy to customize the report. He can choose report output formats--xls, csv, or PDF, and selects the year he wants to review. Joe sets up the current date as the report delivery date, so the report will generate and be available within seconds. He also sets up the report to run every month, by selecting the filter icon again, and setting up reports with a requested delivery date for each future month.
